# Point and Go

Joel Carlson

This will be doing teleportation in 3 fun ways
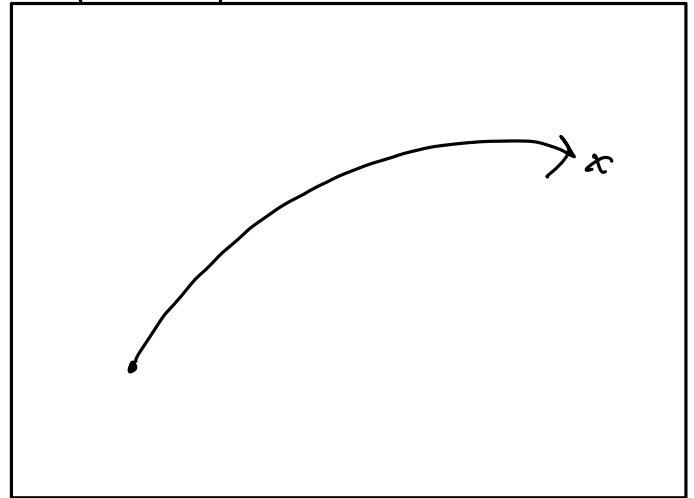

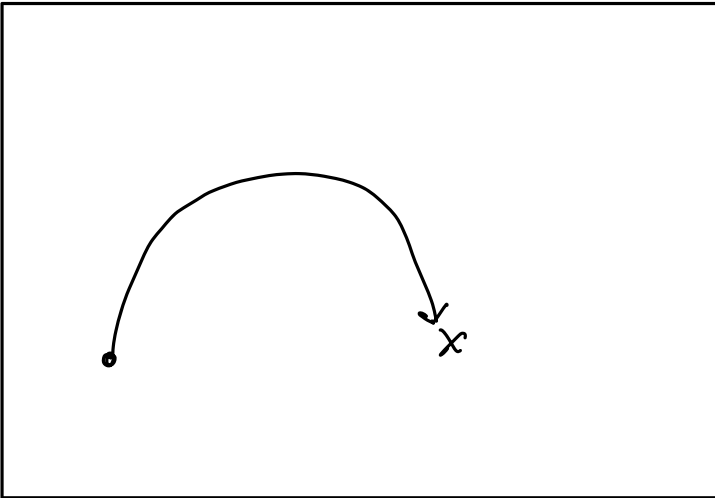

1. Point-and-Click Teleportation
This is the most basic where you point at a location and teleport there.

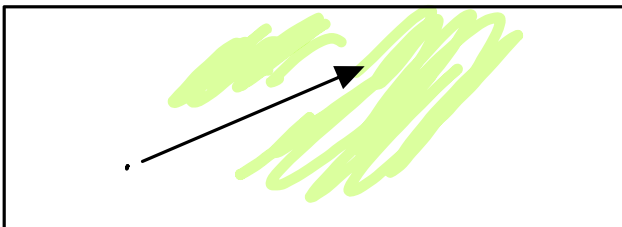

2. Arc-Based Teleportation
This will be a variation of the first one where this is a long bendy stick that the user can adjust

It will adjust to how you point the controller

3. Harry Potter Apparition
This will be teleportation to another pointed location but it will look like apparition.

It will look better than this, I can't draw
